Article Management System - Technical Specification & Architecture Document

1. Executive Summary & Architecture Overview

1.1 Executive Brief

The Article Management System is a specialized API designed for the lifecycle management of articles and their categorical associations. It implements a standard CRUD data pattern to ensure structured content organization and retrieval, serving as a backend service for content administration.

1.2 Maturity Assessment

The project is technically READY for execution as the parser reports zero structural gaps and a perfect health index. However, the current specification is an abstract API contract lacking low-level implementation details, runtime configurations, and explicit quality gates.

1.3 Technical Stack

- No specific languages or frameworks defined in the source data.

1.4 Architectural Constraints

- No specific architectural constraints defined in the source data.

1.5 Critical Dependencies

- Referential integrity between Articles and Categories entities.

2. Architecture Workflows & Visual Diagrams

No diagrams are available for this specification.

3. Detailed Technical Specifications & Business Rules

3.1 Requirements Traceability

Requirement ID	Description	Source	Status
API-CRUD-ART	CRUD operations for Article management	api.md	Defined

Requirement ID	Description	Source	Status
API-CRUD-CAT	CRUD operations for Category management	api.md	Defined

3.2 Security Rules

No specific security rules defined in the source data.

3.3 Data Models

Entity	Description	Attributes
Article	Core content unit	TBD (Refer to API Contract)
Category	Classification unit for articles	TBD (Refer to API Contract)

4. Project Governance & Structural Gaps

4.1 Structural Gaps

No structural gaps identified by the parsing agent.

4.2 Remediation & Workflow

As the project is marked as ready but abstract, the next workflow phase should focus on defining the low-level implementation details, runtime configurations, and quality gates.

5. Technical & Domain Glossary (Terminology Reference)

Term	Category	Context Anchor	Project Definition
(Empty)	(Empty)	(Empty)	No glossary terms provided in source data.
