# Gestion d'Articles à Vendre - Technical Specification & Architecture Document

## 1. Executive Summary & Architecture Overview

### 1.1 Executive Brief

This project establishes the technical governance and quality standards for an e-commerce article management system. It focuses on defining the development constitution, coding standards, and branching workflows to ensure architectural consistency across the platform's lifecycle.

### 1.2 Maturity Assessment

The specifications provide a foundational governance framework but lack concrete implementation details, tool configurations, and automated testing gates. Despite the high parser health index, the absence of technical nodes indicates a purely constitutional state. The project is READY for the initial setup phase, provided that the specific technology stack is defined during execution.

### 1.3 Technical Stack

- *No specific languages, frameworks, or databases defined in the current source data.*

### 1.4 Architectural Constraints

- Adherence to defined Coding Standards & Style.
- Strict compliance with the Branching & PR Workflow.

### 1.5 Critical Dependencies

- Definition of the specific runtime environment.
- Establishment of the CI/CD pipeline to enforce the PR Workflow.
- Configuration of the version control system according to the branching strategy.

## 2. Architecture Workflows & Visual Diagrams

*No diagrams provided in the source data.*

## 3. Detailed Technical Specifications & Business Rules

### 3.1 Requirements Traceability

| Identifier | Requirement Description                    | Source | Status |
|------------|--------------------------------------------|--------|--------|
| N/A        | No atomic identifiers found in parsed_data | N/A    | N/A    |

### 3.2 Security Rules

No specific security rules defined in the source data.

### 3.3 Data Models

No data models defined in the source data.

## 4. Project Governance & Structural Gaps

### 4.1 Structural Gaps

- **Implementation Details:** Absence of concrete technical implementation specifications.
- **Tool Configurations:** Lack of specific configuration files or environment settings.
- **Automated Testing Gates:** No definition of CI/CD testing requirements or quality gates.

### 4.2 Remediation & Workflow

The project must transition from a "Constitutional" state to an "Implementation" state by:

1. Defining the specific technology stack (Language/Framework/DB).
2. Mapping the high-level governance rules to specific linting and testing tools.
3. Implementing the CI/CD pipeline to automate the enforcement of the Branching & PR Workflow.

## 5. Technical & Domain Glossary (Terminology Reference)

| Term | Category | Context Anchor | Project Definition                        |
|------|----------|----------------|-------------------------------------------|
| N/A  | N/A      | N/A            | No glossary items provided in source data |
